### Rotary Trim24

<http://www.dfgus.com/trimmers/index.html#trim24>

The Rotary Trim24 has a cutting width of 24".

The rigid steel construction eliminates possible warping by other models that use wood construction.

Using steel instead of aluminum allows you to utilize magnetic strips which keep your work securely in place and gives you a free hand to create a more confident cutting action.

The surface of the trimmer features a positioning grid and ruler (both standard and metric measurements) which eliminates any guess work in trimming.
